Description

We designed a series of tools that support collaboration in online group art therapy by enhancing awareness of non-verbal cues and group presence.

Our goals in designing these tools were to promote shared creative experiences, promote emotional bonding between group members, allow for meaningful interaction through non-verbal communication, and allow group members to be aware of each other without actually seeing each other.

Enhancing Feedthrough

- Shared online drawing space utilizing tablets.
- Representation of pen pressure, finger contact width, and drawing speed.

Exploration of Painting Primitives

- Users can create collages from clip art images or from found images.
- Users can also play around as if in a sandbox.

Painting the Environment

- Users are represented as silhouettes.
- Users can draw strokes in a 3D environment and interact with their environment.

Stick Figure Art Therapy

- Conveys its user’s body language in a unique way, providing people with even more ability to shield themselves from unwanted attention to their actual appearance.
- Users can create artifacts together using sticks, rather than through drawing.
  - Similar to driftwood art.
- Users can also engage in playful interactions with each other, thus promoting emotional bonding.

Bodyspace Painting

- Users can customize their appearances in an artistic way by painting on their own silhouettes.
